Emsisoft Decrypter is a PC utility that allows you to decode and recover files that are affected by the RDM extension ransomware. Radamant is a powerful cyber-security threat that encrypts and demands payment for unencrypted files. All types of files can be encrypted by the malware, including: Documents, spreadsheets, presentations, pictures, audio and video files; System files and folders; Logs, executables, configuration files, etc. The encryption mechanism used by the malware makes files inaccessible and then asks victims for payment in Bitcoin to get their files decrypted. It is important to note that the malware doesn't discriminate and doesn't have a preference for any file type and can encrypt pretty much any file, so you should not panic. If the ransom note says you have two days to pay or else you lose your files, that means you have little to no time to recover your files and get your data decrypted. Are You Under Ramadant Ransomware Attack? Here is a step by step guide on how to fix malware Remove the Malware/Adware via your control panel. Reinstall your registry back to its original state. Replace missing files and restore your system files, like Windows, etc. Clean your browser cache, cookies, and temporary files. How to remove Radamant Ransomware Files? Radamant Ransomware Scam Alert: Update: It seems that the ransom demand is increasing and many people are getting affected. One of the victims who contacted Bleeping Computer stated that he paid and the ransom was decreased. It's suggested that you don't pay the ransom and wait until it resolves it without paying anything. This ransomware is very dangerous. It encrypts all files that are created on the computer. The malware usually spreads by exploiting known vulnerabilities in the affected system, like when exploiting the Windows Installer (MSI) vulnerability. The malicious software first adds a new value to the HKCU\Software\Classes\exefile\shell\open\command registry key that points to a binary file that it generates. Next, the malware creates a dummy executable that has the same name as the value of the HKCU\Software\Classes\exefile\shell\open\command registry key. The malware then starts execution of the executable file. Each affected file can be of any file type. As mentioned earlier, the file types affected by the ransomware are: Word, excel, pdf, powerpoint, pptx, pptm, and xlsx files. How to remove Radamant Ransomware Files from your Windows PC? It is recommended that you purchase a reliable and competent security product such as AVG Anti-V
